

# **iFAX**: Product Data Sheet

## Overview

1FAX is a software application that manages inbound/outbound fax transmissions and outbound emails for 1MAGE installations that wish to capture and dispatch images electronically.

1FAX also manages fax phone codes, email addresses, and provides system administration utilities for server-based 1FAX functions.

## Advantages: What 1FAX Does for You

To respond to customers' demands for confirmation of goods purchased or services rendered, 1FAX permits you to fax or email supporting document images (such as purchase orders or receipts) from your PC, MAC, or Linux Station in direct response to a customer's request.

No longer do you have to remove documents from their filing locations, manually fax them, and risk misfiling them when you are finished. To shorten your collection cycle, 1FAX lets you fax or email your invoices instead of mailing them. In addition, you can combine your Line-of-Business application with 1MAGE and other optional modules to intersperse supporting document images with every invoice you send to a customer.

Not only do you avoid the expense of printing and mailing each invoice, you also reduce the cost of hand collating invoices with their supporting documents.

## Features

- Automatically routes inbound faxes to user files, laser printers, or the 1MAGE server indexing queue
- Allows outbound fax or email transmission of images captured in standard graphic file formats as well as computer reports
- Keeps a log of all inbound and outbound activity
- Monitors the status of queued faxes
- Provides phone book support for the creation and maintenance of customer codes and associated data
- Stages faxes and emails to be released at user-defined intervals

## Technicals

- Currently available on: Linux, IBM AIX, HP-UX, SUN, and Windows Servers
- Compatible with Class 2 modems that conform to CCITT standards (See 1mage for approved list)

All Applications. All Documents. All Together.
