

Overview

Zoë is a universal integration tool that allows users to seamlessly integrate with your Line of Business (LOB) application as well as index documents from within the MS Office Suite through the use of web services.

Zoë is an extension of the 1mage V1A (View 1images Anywhere) application that goes beyond the simple display or circulation of documents. Zoë executes a web service, running under the Tomcat Apache web services engine, developed to assist clients to image enable their business or personal software applications with ease.

Zoë functions in many environments including .NET, JAVA, JSP and PHP, as a downloadable plug and play technology. With the downloadable 'plug in' for MS Office the user automatically interfaces with Word, Excel, PowerPoint and Outlook to index documents directly into the 1IMAGE DMS through V1A, a browser application supported by IE, Firefox and Safari.

Zoë's support of Outlook allows the user to save either an email's text message or the message and attachments, if applicable, with a single selection. In this mode the 1IMAGE DMS is predefined to automate the indexes of the Outlook email to further save the user time and to ensure accurate indexing of the Outlook email. When the user retrieves the archived email the user can sort and select the emails according to any of the index keys; i.e. to, from, date and subject using the V1A display list. If the predefined index keys are not sufficient to classify the email then an unlimited number of keys maybe created to further pinpoint the desired email.

Features

- Integrate 1IMAGE and your LOB seamlessly.
- Index files directly into 1IMAGE from the MS Office Suite 2003/07.
- Powerful, Secure, Simple 'click' to Inquiry.
- Available on XP, Vista and Windows 7
